

SLM TRAINING DATASETS DIRECTORY

This directory compiles public, open-source datasets curated to expand your Small Language Model (SLM) capabilities across skill validation, resume parsing and improvement, narrative storytelling, and advanced technical and behavioral interviewing frameworks.

I. Dataset Download Directory

1. Skill Validation & Evaluation

- **EvoStruggle (Skill Generation & Validation)**
<https://github.com/FELIXFENG2019/EvoStruggle>
- **SkillZero (Progressive Skill Generation)**
<https://github.com/ZJU-REAL/SkillZero>

2. Resume Improvement & Scoring

- **Neuralframe AI Resume Dataset**
<https://www.kaggle.com/datasets/saugataroyarghya/resume-dataset>
- **Resume Scorer Application & Prompts**
<https://github.com/rifqi96/resume-scorer>
- **MagicalAPI Resume Parsing & Scoring Models**
<https://github.com/magicalapi/magicalapi-python>

3. Narrative Storytelling Frameworks

- **StoryReasoning (Narrative Coherence)**
<https://huggingface.co/datasets/daniel3303/StoryReasoning>
- **MediaSum (Interview to Narrative Summaries)**
<https://huggingface.co/datasets/nbroad/mediasum>

4. Deep Interviewing (Transcripts & Analysis)

- **AI Recruitment Pipeline Dataset (ATS & Transcripts)**

<https://www.kaggle.com/datasets/yaswanthkumary/ai-recruitment-pipeline-dataset>

- **Anthropic Interviewer (1,250 Qualitative AI Transcripts)**

<https://huggingface.co/datasets/Anthropic/AnthropicInterviewer>

- **MentalChat16K (Behavioral Deep-Probing Transcripts)**

<https://huggingface.co/datasets/ShenLab/MentalChat16K>

5. Technical Interviewing & Frameworks

- **HiringAssistant (Technical Question Generation)**

<https://github.com/MohammedSaim-Quadri/HiringAssistant>

- **Neetcode Solutions (Technical Interview Problem Frameworks)**

<https://github.com/darpan-jain/neetcode-solutions>

II. Dataset Summaries & Use Cases

Below is a detailed breakdown of how each resource can be used to specifically train your SLM to parse, reason, and interact at a higher standard.

EvoStruggle & SkillZero Frameworks

CATEGORY: SKILL VALIDATION

Summary: These repositories contain code and reinforcement learning frameworks specifically designed for "skill validation" and "skill evolution" in autonomous agents. They map out the methodology for proving whether a claimed skill can actually execute a task.

Use Case: Train your SLM on the logical reasoning required to validate skills. By processing how these models document, test, and score "skills," your SLM can learn to look at a candidate's resume and generate targeted questions or scenarios that actually test for evidence of those skills, rather than just matching keywords.

Neuralframe AI & Resume Scorer Repositories

CATEGORY: RESUME IMPROVEMENT & SCORING

Summary: The Kaggle dataset features nearly 10,000 parsed resumes categorized by educational backgrounds, objectives, and mapped skills. The GitHub repositories (Resume-Scorer and MagicalAPI) provide the programmatic logic and semantic evaluation metrics for scoring these resumes out of 100 against job descriptions.

Use Case: Your SLM can ingest the Neuralframe data to understand the structural variety of real resumes. It can use the scoring logic from the GitHub repositories to learn how to identify "skill gaps," improve phrasing, and provide actionable, ATS-friendly improvement coaching for candidate profiles.

StoryReasoning & MediaSum

CATEGORY: NARRATIVE STORYTELLING FRAMEWORKS

Summary: StoryReasoning contains 4,178 cohesive narratives complete with "Chain-of-Thought" tabular breakdowns that track character logic, emotion, and environment. MediaSum provides over 463,000 interview transcripts mapped directly to abstractive, narrative summaries.

Use Case: Essential for training the SLM in "Storytelling Frameworks" (e.g., STAR method). It teaches the model how to extract key actions and outcomes from disjointed interview conversations (MediaSum) and restructure them into coherent, logically sound career narratives (StoryReasoning) that candidates can use.

AI Recruitment Pipeline, AnthropicInterviewer & MentalChat16K

CATEGORY: DEEP INTERVIEWING (TRANSCRIPTS)

Summary: This trio provides a goldmine of transcript data. The Kaggle Recruitment pipeline links actual applicant resumes and transcripts to the final hiring decision. The Anthropic dataset features 1,250 professional interviews conducted by an AI, showcasing scalable qualitative probing. MentalChat16K contains clinical/behavioral coaching dialogues.

Use Case: This trains the SLM in *Deep Interviewing*. By studying how AI (Anthropic) and clinical coaches (MentalChat) gently probe for deeper behavioral insights, and correlating transcripts with successful hires (Recruitment Pipeline), your SLM learns to conduct empathetic, context-aware, and highly revealing candidate interviews.

HiringAssistant & Neetcode-Solutions

CATEGORY: TECHNICAL INTERVIEWING

Summary: These repositories contain extensive coding challenges, solutions, and AI-prompt workflows for generating custom technical interview questions based on candidate profiles.

Use Case: Equips the SLM with a vast library of technical scenarios. Instead of generic questions, the SLM can parse a candidate's specific tech stack and pull from these frameworks to dynamically generate realistic, role-specific technical problems and evaluate the logic of the candidate's answers.
