3. Narrative Storytelling Frameworks

- **ROCStories / StoryCloze (Causal & Temporal Narrative Logic)**
https://huggingface.co/datasets/allenai/story_cloze
- **Reddit WritingPrompts (Structured Story Arc Progression)**
https://huggingface.co/datasets/europol/writing_prompts
- **NarrativeQA (Complex Story Arc Comprehension)**
<https://huggingface.co/datasets/mteb/NarrativeQARetrieval>
- **Persona-Chat (Grounded Personal Story & Background Consistency)**
https://huggingface.co/datasets/facebook/persona_chat
- **StoryReasoning (Chain-of-Thought Narrative Logic)**
<https://huggingface.co/datasets/daniel3303/StoryReasoning>

4. Deep Interviewing (Transcripts & Analysis)

- **Machine Learning Technical Interview QA**
<https://huggingface.co/datasets/Shreyash23/interview>
- **Curated Technical & Behavioral Interview QA**
<https://huggingface.co/datasets/Aiman1234/Interview-questions>
- **CounselChat (Active Listening & Qualitative Probing)**
<https://huggingface.co/datasets/nbertagnolli/counsel-chat>
- **EmpatheticDialogues (Emotional Context & Deep Probing)**
https://huggingface.co/datasets/facebook/empathetic_dialogues
- **DailyDialog (Multi-turn Dynamic Dialogue)**
https://huggingface.co/datasets/daily_dialog

5. Technical Interviewing & Frameworks

- **System Design Primer (Architecture & System Design Questions)**
<https://github.com/donnemartin/system-design-primer>
- **Tech Interview Handbook (Algorithms & Interview Evaluation)**
<https://github.com/yangshun/tech-interview-handbook>
- **APPS Dataset (10,000 Coding Interview Problems)**
<https://huggingface.co/datasets/codeparrot/apps>
- **CodeXGlue (Code Understanding & Refinement Benchmark)**
<https://huggingface.co/datasets/microsoft/codexglue>
- **LeetCode Interview Problem Solutions Framework**
<https://github.com/greco85/leetcode-problems>

II. Dataset Summaries & Use Cases

1. SkillSpan

CATEGORY: SKILL VALIDATION

Summary: Contains annotated hard and soft skills extracted from tech and non-tech job postings mapped onto the ESCO taxonomy.

Use Case: Teaches your SLM to differentiate between claimed soft skills (e.g., leadership) and verified hard technical competencies.

2. TechWolf Skill Extraction

CATEGORY: SKILL VALIDATION

Summary: Sentence and span-level datasets annotated with ESCO skills across IT and general engineering job postings.

Use Case: Enables the SLM to parse resumes/JDs and isolate precise technical skill boundaries rather than hallucinating broad skills.

3. MBPP (Mostly Basic Python Problems)

CATEGORY: SKILL VALIDATION

Summary: 974 short Python programming problems containing task descriptions, code solutions, and test cases.

Use Case: Fine-tunes the SLM to execute logic-validation loops—verifying if a candidate's code submission actually solves the problem requirements.

4. OpenAI HumanEval

CATEGORY: SKILL VALIDATION

Summary: 164 hand-written programming problems with docstrings, function signatures, unit tests, and reference solutions.

Use Case: Trains the model to dynamically validate code syntax, edge cases, and logical accuracy during live technical screens.

5. KOMPETENCER

CATEGORY: SKILL VALIDATION

Summary: Fine-grained skill and competence annotation dataset based on European labor taxonomies.

Use Case: Expands your SLM's vocabulary for validating domain expertise across non-US and international recruitment formats.

6. DatasetMaster Normalized Resumes

CATEGORY: RESUME IMPROVEMENT & ATS SCORING

Summary: Merged dataset of real and synthetic technical resumes normalized into a clean JSON schema.

Use Case: Provides structural training so the SLM can parse raw resume text into JSON objects and generate structured rewriting recommendations.

7. ResumeAtlas

CATEGORY: RESUME IMPROVEMENT & ATS SCORING

Summary: 13,389 resumes with multi-round human expert annotations mapped to specific experience tiers and job fits.

Use Case: Trains the SLM to evaluate seniority levels accurately and give targeted advice on how to upgrade resume bullet points to hit higher seniority targets.

8. Candidate Job Role & Skill Gap Dataset

CATEGORY: RESUME IMPROVEMENT & ATS SCORING

Summary: Candidate profiles paired with targeted job roles, containing explicit skill gap flags and qualification match ratings.

Use Case: Directly improves the SLM's ability to run gap analysis and output actionable "What's Missing" reports for candidates.

9. Salient Entity Extraction Dataset

CATEGORY: RESUME IMPROVEMENT & ATS SCORING

Summary: Crowdsourced dataset labeling entity spans (Skill, Qualification, Experience, Domain) in job text.

Use Case: Teaches the SLM to extract exact requirements from job descriptions to compare against candidate resumes.

10. Multi-Profile Resume Skill Mapping

CATEGORY: RESUME IMPROVEMENT & ATS SCORING

Summary: Real resume samples categorized by career discipline, key objectives, and core skills.

Use Case: Helps the SLM benchmark resumes across 25+ job categories and rewrite weak professional summaries.

11. ROCStories / StoryCloze

CATEGORY: NARRATIVE STORYTELLING FRAMEWORKS

Summary: Benchmark dataset capturing logical, temporal, and causal connections in short 5-sentence stories.

Use Case: Teaches the SLM logical narrative consistency—ensuring candidate responses follow logical Cause -> Action -> Effect paths.

12. Reddit WritingPrompts

CATEGORY: NARRATIVE STORYTELLING FRAMEWORKS

Summary: 300,000+ prompt and story pairs featuring rich character development and narrative resolution arcs.

Use Case: Trains the SLM to structure long-form narrative explanations, converting bullet points into compelling executive summaries.

13. NarrativeQA

CATEGORY: NARRATIVE STORYTELLING FRAMEWORKS

Summary: Questions and answers based on complete movie scripts and books, emphasizing global narrative comprehension.

Use Case: Helps the SLM track overarching career narrative arcs across multiple jobs and long interview answers.

14. Persona-Chat

CATEGORY: NARRATIVE STORYTELLING FRAMEWORKS

Summary: Multi-turn dialogues where agents converse while maintaining consistent personal traits and facts.

Use Case: Ensures the SLM maintains a consistent candidate voice and backstory throughout simulated mock interview sessions.

15. StoryReasoning

CATEGORY: NARRATIVE STORYTELLING FRAMEWORKS

Summary: 4,178 stories annotated with step-by-step Chain-of-Thought reasoning for narrative logic.

Use Case: Equips the model to guide candidates through the STAR method (Situation, Task, Action, Result) step-by-step.

16. Machine Learning Interview QA

CATEGORY: DEEP INTERVIEWING

Summary: Real interview questions covering theoretical ML concepts, data scenario handling, and system tradeoffs.

Use Case: Enables the SLM to conduct deep-dive technical follow-up questions when a candidate gives surface-level answers.

17. Curated Interview Questions Dataset

CATEGORY: DEEP INTERVIEWING

Summary: Multi-domain interview questions categorized by difficulty, topic, and concise answer frameworks.

Use Case: Serves as a direct fine-tuning corpus for interview question generation tailored to candidate experience level.

18. CounselChat

CATEGORY: DEEP INTERVIEWING

Summary: Expert counselor responses paired with complex user inquiries, focusing on reflective active listening.

Use Case: Teaches the SLM advanced qualitative probing techniques—asking empathetic follow-ups that extract deeper candidate insights.

19. EmpatheticDialogues

CATEGORY: DEEP INTERVIEWING

Summary: 25k conversations grounded in emotional contexts with explicit emotional state labels.

Use Case: Helps the AI adapt its tone during stressful mock interview simulations, providing encouraging yet rigorous feedback.

20. DailyDialog

CATEGORY: DEEP INTERVIEWING

Summary: High-quality multi-turn dialogues covering daily life, work, and professional interaction topics.

Use Case: Fine-tunes the SLM on natural conversational flow, turn-taking, and conversational transition cues.

21. System Design Primer

CATEGORY: TECHNICAL INTERVIEWING

Summary: Comprehensive architecture diagrams, trade-off analyses, and design blueprints for large-scale systems.

Use Case: Powers the SLM's capability to evaluate senior/architect candidate responses on scalability, caching, and databases.

22. Tech Interview Handbook

CATEGORY: TECHNICAL INTERVIEWING

Summary: Structured rubrics, algorithmic patterns, and evaluation frameworks for tech interviews.

Use Case: Provides the SLM with structured scoring rubrics to evaluate candidate problem-solving performance.

23. APPS Dataset

CATEGORY: TECHNICAL INTERVIEWING

Summary: 10,000 coding problems with test cases, ranging from introductory interview questions to competitive programming.

Use Case: Benchmark and fine-tuning dataset for automated technical question generation and code evaluation.

24. CodeXGlue

CATEGORY: TECHNICAL INTERVIEWING

Summary: Benchmark dataset for code-to-code, text-to-code, and code summarization tasks.

Use Case: Improves the SLM's ability to explain candidate code errors and suggest refactored, optimized solutions.

25. LeetCode Interview Solutions Framework

CATEGORY: TECHNICAL INTERVIEWING

Summary: Data repository of canonical algorithmic problems, constraints, complexity analysis (Time/Space), and solutions.

Use Case: Enables the SLM to verify time/space complexity claims made by candidates during technical interviews.
