

Candidate Evaluation & Resume Datasets Catalog

Curated Benchmarks for Resume Parsing, Candidate Scoring, Job Matching & Skill Validation

Target Application: HyrLink Platform & Talent Matching Systems

Date: August 2026

Overview & Evaluation Context

This catalog compiles high-quality, open-access datasets across four core recruitment tech domains: **Resume Parsing & Entity Extraction (NER)**, **Resume-to-Job Description Matching**, **Candidate Scoring & Interview Likelihood Modeling**, and **Skill Extraction & Validation**. These resources serve as benchmark datasets for validating AI models, evaluating candidate scoring pipelines, and auditing skill-level inference systems.

1. Candidate Scoring & Interview Outcome Datasets

Scoring & Benchmarks

Resume Skills vs. Interview Calls Dataset

Platform: Kaggle Format: CSV (Tabular)

Key Features: Resume Score, Interview Calls, Skills Count, Projects Count, Education

Captures candidate attributes (degrees, years of experience, project count, certifications, skills count, GitHub presence) alongside an explicit engineered resume score and actual resulting interview call outcomes. Ideal for training candidate scoring models and validating feature weightings for interview shortlisting.

Candidate Scoring Predictive Modeling Interview Calls Feature Importance

Skill Scoring & Evidence Retrieval NLP Corpus

Platform: GitHub (OfirOhan) Format: Python / JSON / Text Chunks

Key Features: Ordinal 1–5 Skill Proficiency, Multi-document Corpus, Ground Truth Personas

An end-to-end NLP framework and corpus designed to score candidate proficiency in specific skills on an ordinal 1–5 scale (Awareness to Expert) using candidate career documents (CVs, project READMEs, recommendations, code repositories). Perfect for training fine-tuned ordinal classifiers (e.g., DeBERTa) and validating RAG-based skill inference.

Skill Validation Ordinal Scoring RAG Pipeline DeBERTa Benchmark

Candidate Recommendation & Cluster Model Dataset

Platform: GitHub (Srikar-R) Format: CSV / Jupyter Notebooks

Key Features: Experience, Location Distance, Resume Score, Skill Match %

Dataset with structured candidate attributes including normalized experience, geographic distance from job, parsed resume score, and skill percentage alignment. Features human-validated recommendation clusters ("Highly Recommended", "Moderately Recommended", "Low", "Not Recommended").

Candidate Ranking Clustering Recommendation Engine

Resume-Job Vacancy Matching Dataset (HSE Hackathon)

Platform: Kaggle (Darysha) **Format:** Tabular / Relational CSV
Key Features: Applicant Profile, Vacancy Specs, Response Status (Invitation/Rejection)

A real-world recruitment dataset containing structured applicant profiles and job vacancy postings paired with explicit historical outcome labels ("Invitation" vs "Rejection"). Exceptional benchmark for training end-to-end candidate-job suitability algorithms and matching models.

- Job Matching
- Outcome Prediction
- Labor Market Analysis

<https://www.kaggle.com/datasets/darysha/hse-hackathon/data>

Resume & Job Description Paired Corpus (resume-jd-match)

Platform: Hugging Face (facehuggerapoorv) **Format:** Parquet / JSON
Key Features: Full Resume Texts, Detailed Job Descriptions, Domain Labels

A dataset containing paired resumes and detailed job descriptions across multiple industries (e.g., Business Analyst, Health Insurance, Accounting, Tech). Useful for embedding-based semantic search, cross-encoder ranking, and fine-tuning dense retriever models.

- Semantic Search
- Cross-Encoder
- Dense Retrieval

<https://huggingface.co/datasets/facehuggerapoorv/resume-jd-match>

AI-Driven Resume Screening & Candidate Classification Dataset

Platform: Kaggle (Sonal Shinde) **Format:** CSV
Key Features: Technical Skills, Experience Level, Projects, Open-Source Activity

Models end-to-end ATS screening by tracking candidate experience, skill alignment with target vacancy, academic background, project exposure, and GitHub/open-source contribution metrics.

- ATS Screening
- Candidate Evaluation
- Open Source Metrics

<https://www.kaggle.com/datasets/sonalshinde123/ai-driven-resume-screening-dataset>

Synthetic Resume Screening & HR Q&A LLM Fine-Tuning Corpus

Platform: Kaggle (Syncora AI) **Format:** JSONL (OpenAI / Chat Format)
Key Features: HR Dialogues, Candidate Evaluation Q&A, Zero PII

Synthetic dataset structured for LLM fine-tuning containing HR screening conversations, candidate evaluation Q&A, and career guidance dialogues. Ideal for training conversational talent agents and automated screening assistants.

- LLM Fine-Tuning
- Synthetic Data
- HR Dialogues
- Zero PII

3. Resume Parsing & Named Entity Recognition (NER)

Parsing & Extraction

Advanced Resume Parser & Job Matcher Schema Corpus

Platform: Hugging Face (datasetmaster) **Format:** JSON (Normalized Schema)

Key Features: Real & Synthetic Technical CVs, Work History, Education, Tech Stack

Merged collection of real and synthetic technical resumes normalized into a unified, clean JSON schema. Contains nested structures for personal info, experience, education, and technical environments.

JSON Schema

Resume Parsing

Technical Roles

LiveCareer Categorized Resume Benchmark Dataset

Platform: Hugging Face (Saba06huggingface) **Format:** CSV + Raw PDF / HTML

Key Features: 2,400+ Resumes across 24 Job Categories

A comprehensive benchmark collection of over 2,400 real-world resumes spanning 24 industry categories (IT, Engineering, Healthcare, Sales, Finance, HR, etc.). Provided in plain string text, HTML, and original PDF formats.

Text Classification

Multimodal Resume

24 Industries

GitHub Profiles for Professional Resume Generation

Platform: Hugging Face (jeff-calderon) **Format:** JSONL (Conversational)

Key Features: Developer Bio, Repository History, Technical Complexity

Curated dataset mapping developer bios and raw GitHub project histories into polished professional resume summaries and project bullet points. Designed for training models to validate and translate technical portfolio activity into verified skills.

GitHub Translation

Developer Skills

Portfolio Validation

4. Skill Extraction & Dynamic Skill Validation

Taxonomy & Extraction

Dynamic Skill Extractor Model & Corpus (spaCy NER)

Platform: Hugging Face (amjad-awad) **Format:** spaCy NER Pipeline & Labeled Entities

Key Features: Skill Entity Extraction, Contextual Skill Identification

A specialized Named Entity Recognition (NER) dataset and model built for spaCy that dynamically extracts domain-specific and emerging technical skills directly from unstructured candidate resumes and job postings without relying on static keyword dictionaries.

spaCy NER

Skill Extraction

Unstructured Text

<https://huggingface.co/amjad-awad/skill-extractor>

SkillEvolBench: Procedural Skill Evolution Benchmark

Platform: Hugging Face (SkillEvolBench-Team) **Format:** Benchmark Bundle / Task Bundles
Key Features: Skill Acquisition, Verification Suites, Procedural Trajectories

Diagnostic benchmark for evaluating how agents and AI tools convert task execution into reusable, verified procedural skills. Includes process checks, edge-case tests, and deterministic outcome verifiers to audit skill capabilities.

- Skill Verification
- Execution Audit
- Procedural Skills

Summary Matrix & Recommendations

Dataset Name	Primary Domain	Format / Structure	Recommended Use Case
Resume Skills vs Interview Calls	Candidate Scoring	Tabular CSV	Validate scoring weights against real interview shortlist outcomes
Skill Scoring NLP Model	Skill Validation	JSON / Ordinal 1-5	Train fine-tuned models to assess skill depth from documents
Resume-Job Vacancy Matching	Job Matching	Tabular CSV	Benchmarking candidate-job recommendation algorithms
resume-jd-match	Semantic Matching	Parquet / JSON	Fine-tuning dense retrievers and vector embeddings
Advanced Resume Parser	Resume Parsing	JSON Schema	Establishing standard JSON schemas for resume extractions
LiveCareer Resume Corpus	Classification	CSV, Text, PDF	Categorizing candidate profiles into job families
GitHub Profiles for Resumes	Skill Validation	JSONL	Converting raw developer code activity into verified skills
